INDEX OF VOLUME XXI

Aarts, J. M. and de Groot, J. *Complete regularity as a separation axiom*, 96–105
Alperin, J. L. *A classification of n-abelian groups*, 1238–1244
Amitsur, S. A. *Correction to "Arithmetic linear transformations"*, 1–5
Anderson, T. *Hereditary radicals and derivations of algebras*, 372–377
Antonelli, Peter L. *Structure theory for Montgomery-Samelson fiberings between manifolds.* I, 170–179
——— *Structure theory for Montgomery-Samelson fiberings between manifolds.* II, 180–186
——— *Differentiable Montgomery-Samelson fiberings with finite singular sets*, 1489–1495
Arnold, Jimmy T. *On the ideal theory of the Kronecker function ring and the domain $D(X)$*, 558–563
Artmann, Benno. *Hjelmslev planes derived from modular lattices*, 76–83
Atkin, A. O. L. *Ramanujan congruences for $p_{-k}(n)$: Corrigendum*, 256

Barnes, Bruce Alan. *The Fredholm elements of a ring*, 84–95
Barth, K. F. and Schneider, W. J. *On a question of Seidel concerning holomorphic functions bounded on a spiral*, 1255–1262
Beasley, LeRoy B. *Maximal groups on which the permanent is multiplicative*, 495–497
Beesack, Paul R. *On certain discrete inequalities involving partial sums*, 222–234
Beidleman, James C. *Generalized Frattini subgroups of finite groups.* II, 418–429
Beineke, L. W. *Minimal decompositions of complete graphs into subgraphs with embeddability properties*, 992–1000
Beineke, Lowell W. and Guy, Richard K. *The coarseness of the complete bipartite graph*, 1086–1096
Bender, Edward A. and Tucker, Thomas W *Th exponents of strongly connected graphs*, 769–782
Benz, Walter. *Zur geometrie der Körpererweiterungen*, 1097–1122
Bercov, R. D. *On simply transitive primitive permutation groups*, 1062–1068
Billis, M. J. *Finite groups whose powers have no countably infinite factor groups*, 965–969
Blatt, D. and Szekeres, G. *A skew Hadamard matrix of order 52*, 1319–1322
Borwein, D. *A Tauberian theorem for Borel-type methods of summability*, 740–747
Boyd, David W. *Indices of function spaces and their relationship to interpolation*, 1245–1254
Brannan, D. A. and Pommerenke, Ch. *On the Bernstein-Szegö theorem for complex polynomials*, 370–371
Brown, Benson Samuel. *The* mod $\mathfrak{C}$ *suspension theorem*, 684–701
——— *A first approximation to $\{X, Y\}$*, 702–711
——— *A spectral sequence for cohomotopy*, 712–729
Brown, W. G. et Moon, J. W. *Sur les ensembles de sommets indépendants dans les graphes chromatiques minimaux*, 274–278
Brungs, H.-H. *Generalized discrete valuation rings*, 1404–1408
Burgess, W. D. *Rings of quotients of group rings*, 865–875
Byrd, Richard D. *Archimedean closures in lattice-ordered groups*, 1004–1012

Camina, A. R. and Gagen, T. M. *Groups with metacyclic Sylow 2-subgroups*, 1234–1237
Cantor, David G. *On arithmetic properties of the Taylor series of rational functions*, 378–382
Carlson, R. E. and Cullen, C. G. *A characterization of intrinsic functions on Ω_n*, 136–146
Caughran, James G. *Two results concerning the zeros of functions with finite Dirichlet integral*, 312–316
Caveny, James. *Absolute convergence factors for H^p series*, 187–195
Chacron, M. *On a theorem of Herstein*, 1348–1353
Chen, C. C. and Grätzer, G. *Stone lattices.* I: *Construction theorems*, 884–894
——— *Stone lattices.* II: *Structure theorems*, 895–903
Childs, L. N. *On projective modules and automorphisms of central separable algebras*, 44–53

Ching, Wai-Mee. *Non-isomorphic non-hyperfinite factors*, 1293–1308
Choe, Tae Ho. *Notes on locally compact connected topological lattices*, 1533–1536
Christiansen, R. A. *Recurrent transformation groups*, 564–575
Cohn, Richard M. *Systems of ideals*, 783–807
Conatser, C. and Keown, R. *Biorthogonal systems in l^p-spaces*, 625–638
Courter, Richard. *Finite direct sums of complete matrix rings over perfect completely primary rings*, 430–446
Cullen, C. G. and Carlson, R. E. *A characterization of intrinsic functions on Ω_n*, 136–146

Davis, Chandler; Radjavi, Heydar; and Rosenthal, Peter. *On operator algebras and invariant subspaces*, 1178–1181
De Groot, J. *See* de Groot, J.
DeMeyer, F. R. *Projective modules over central separable algebras*, 39–43
Derderian, J. C. *Galois connections and pair algebras*, 498–501
Douglas, A. J. *Generalized Casimir operators*, 1496–1505
Dubuc, Serge. *Transformations affines agissant sur un ensemble compact convexe*, 1076–1082
Dyer, Micheal. *Federer-Čech couples*, 842–864

Eaton, W. T. *A note about locally spherical spheres*, 1001–1003
Edge, W. L. *Three plane sextics and their automorphisms*, 1263–1278
Elliott, P. D. T. A. *The distribution of primitive roots*, 822–841

Finkelstein, Mark. *The reflection principle for Banach space-valued analytic functions*, 1189–1191
Foulser, David A. *Collineation groups of generalized André planes*, 358–369
Fraenkel, Aviezri S. *The bracket function and complementary sets of integers*, 6–27
Fugate, J. B. *A characterization of chainable continua*, 383–393

Gagen, T. M. and Camina, A. R. *Groups with metacyclic Sylow 2-subgroups*, 1234–1237
Garling, D. J. H. *A class of reflexive symmetric* BK*-spaces*, 602–608
Gauthier, Paul. *Cercles de remplissage and asymptotic behaviour*, 447–455
Geller, Dennis and Manvel, Bennet. *Reconstruction of cacti*, 1354–1360
Gewirtz, A. *Graphs with maximal even girth*, 915–934
Gorenstein, Daniel. *Finite groups the centralizers of whose involutions have normal 2-complements*, 335–357
Grätzer, G. and Chen, C. C. *Stone lattices.* I: *Construction theorems*, 884–894
——— *Stone lattices.* II: *Structure theorems*, 895–903
Gray, Alfred. *Isometric immersions of almost Hermitian manifolds*, 456–459
Gray, William J. *A fixed-point theorem for commuting monotone functions*, 502–504
Groemer, H. *On plane sections and projections of convex sets*, 1331–1337
de Groot, J. and Aarts, J. M. *Complete regularity as a separation axiom*, 96–105
Guy, Richard K. and Beineke, Lowell W. *The coarseness of the complete bipartite graph*, 1086–1096

Haddix, G. F.; Mordeson, J. N.; and Vinograde, B. *On purely inseparable extensions of unbounded exponent*, 1526–1532
Hahn, K. T. and Mitchell, Josephine. *Generalization of Schwarz-Pick lemma to invariant volume*, 669–674
Hedrlín, Z. and Mendelsohn, E. *The category of graphs with a given subgraph—with applications to topology and algebra*, 1506–1517
Hill, Paul. *On the decomposition of groups*, 762–768
Himmelberg, C. J. and Van Vleck, F. S. *Some selection theorems for measurable functions*, 394–399
Holland, Samuel S., Jr. *Partial solution to Mackey's problem about modular pairs and completeness*, 1518–1525
Hoo, C. S. *On the criterion of Stasheff*, 250–255
——— *Homotopical nilpotency of loop-spaces*, 479–484
——— *Conilpotency and weak category*, 730–734
Howard, Henry C. *Oscillation criteria for matrix differential equations: Corrigendum*, 1279–1280
Humphreys, J. E. *On the automorphisms of infinite Chevalley groups*, 908–911

Johnson, Norman Lloyd. *A classification of semi-translation planes*, 1372–1387

Kallaher, Michael J. *Right Bol quasi-fields*, 1409–1420
Kantor, William M. *Characterizations of finite projective and affine spaces*, 64–75
Kaplansky, Irving and Shaker, Richard J. *Abstract quadratic forms*, 1218–1233
Kaul, S. K. *On a transformation group*, 935–941
Kelleher, James. *Rings of meromorphic functions on non-compact Riemann surfaces*, 284–300
Kennison, J. F. *Normal completions of small categories*, 196–201
Keown, R. and Conatser, C. *Biorthogonal systems in l^p-spaces*, 625–638
Kerr-Lawson, A. *Some lemmas on interpolating Blaschke products and a correction*, 531–534
Kinney, J. R. and Pitcher, T. S. *On the lower range of Perron's modular function*, 808–816
Kirkpatrick, P. B. *A note on the construction of projective planes from groups*, 1083–1085
Koch, C. F. *Some remarks concerning (f, d_n) and $[F, d_n]$ summability methods*, 1361–1365
Kreith, Kurt. *Lower bounds for the essential spectrum of fourth-order differential operators*, 460–465
Kun Seo, Tae. *See* Tae Kun Seo

Labelle, G. et Rahman, Q. I. *Remarque sur la moyenne arithmétique de fonctions univalentes convexes*, 977–981
Lacroix, Norbert H. *Two-dimensional linear groups over local rings*, 106–135
Lamoreaux, Jack W. *Decomposition of metric spaces with a 0-dimensional set of non-degenerate elements*, 202–216
Lanski, Charles. *Nil subrings of Goldie rings are nilpotent*, 904–907
Lardy, L. J. and Lindberg, J. A., Jr. *On maximal regular ideals and identities in the tensor product of commutative Banach algebras*, 639–647
Lavie, Meira. *The Schwarzian derivative and disconjugacy of nth order linear differential equations*, 235–249
Lee Peng-Yee. *Some linear operators in the L^p spaces*, 648–654
Levin, Mark; McArthur, C. W.; and Singer, Ivan. *On the cones associated with biorthogonal systems and bases in Banach spaces*, 1206–1217
Ligh, Steve. *On division near-rings*, 1366–1371
Lindberg, J. A., Jr. and Lardy, L. J. *On maximal regular ideals and identities in the tensor product of commutative Banach algebras*, 639–647
Lozier, F. W. *A class of compact rigid 0-dimensional spaces*, 817–821
Lyndon, R. C. and Ullman, J. L. *Groups generated by two parabolic linear fractional transformations*, 1388–1403

MacGregor, Thomas H. *An inequality concerning analytic functions with a positive real part*, 1172–1177
MacLane, G. R. and Rubel, L. A. *On the growth of Blaschke products*, 595–601
Majindar, Kulendra N. *On some methods of construction of B.I.B. designs: Corrigendum*, 1024
Manvel, Bennet and Geller, Dennis. *Reconstruction of cacti*, 1354–1360
Marcus, Marvin and Nikolai, Paul J. *Inequalities for some monotone matrix functions*, 485–494
McArthur, C. W.; Singer, Ivan; and Levin, Mark. *On the cones associated with biorthogonal systems and bases in Banach spaces*, 1206–1217
McCandless, Byron H. *On order paracompact spaces*, 400–405
McMullen, P. *Linearly stable polytopes*, 1427–1431
Megibben, Charles. *The generalized Kulikov criterion*, 1192–1205
Mendelsohn, E. and Hedrlín, Z. *The category of graphs with a given subgraph—with applications to topology and algebra*, 1506–1517
Michler, Gerhard. *Idempotent ideals in perfect rings*, 301–309
Milner, E. C. *Partition relations for ordinal numbers*, 317–334
Mitchell, Josephine and Hahn, K. T. *Generalization of Schwarz-Pick lemma to invariant volume*, 669–674
Mohanty, R. and Ray, B. K. *On the behaviour of a series associated with the conjugate series of a Fourier series*, 535–551
——— *On the absolute Cesàro summability of negative order of a series associated with the conjugate series of a Fourier series*, 552–557
Moody, Robert V. *Euclidean Lie algebras*, 1432–1454
Moon, J. W. et Brown, W. G. *Sur les ensembles de sommets indépendants dans les graphes chromatiques minimaux*, 274–278
Mordeson, J. N.; Vinograde, B.; and Haddix, G. F. *On purely inseparable extensions of unbounded exponent*, 1526–1532

Müller, Bruno J. *On Morita duality*, 1338–1347
Mullins, Robert E. *A characterization of the algebra of functions vanishing at infinity*, 751–754

Nasim, C. *Some results relating the behaviour of Fourier transforms near the origin and at infinity*, 942–950
——— *A summation formula involving* $\sigma_k(n)$, $k > 1$, 951–964
Nikolai, Paul J. *Mean value and limit theorems for generalized matrix functions*, 982–991
Nikolai, Paul J. and Marcus, Marvin. *Inequalities for some monotone matrix functions*, 485–494

Ohm, Jack. *Semi-valuations and groups of divisibility*, 576–591

Passman, D. S. *On the semisimplicity of modular group algebras*. II, 1137–1145
Peng-Yee, Lee. *See* Lee Peng-Yee
Pitcher, T. S. and Kinney, J. R. *On the lower range of Perron's modular function*, 808–816
Pommerenke, Ch. and Brannan, D. A. *On the Bernstein-Szegö theorem for complex polynomials*, 370–371
Prasad, J. and Varma, A. K. *An analogue of a problem of J. Balázs and P. Turán*, 54–63
Prugovečki, Eduard. *Topologies on generalized inner product spaces*, 158–169
Puttaswamaiah, B. M. *Unitary representations of generalized symmetric groups*, 28–38
Putz, H. *Construction of transverse fields*, 1146–1159

Radjavi, Heydar. *On self-adjoint factorization of operators*, 1421–1426
Radjavi, Heydar; Rosenthal, Peter; and Davis, Chandler. *On operator algebras and invariant subspaces*, 1178–1181
Rahman, Q. I. et Labelle, G. *Remarque sur la moyenne arithmétique de fonctions univalentes convexes*, 977–981
Ramsay, R. T. *Groups with equal uniformities*, 655–659
Ray, B. K. and Mohanty, R. *On the behaviour of a series associated with the conjugate series of a Fourier series*, 535–551
——— *On the absolute Cesàro summability of negative order of a series associated with the conjugate series of a Fourier series*, 552–557
Rayburn, Marlon C. *On the lattice of σ-algebras*, 755–761
Rhemtulla, A. H. *Commutators of certain finitely generated soluble groups*, 1160–1164
Rhodes, F. *Homotopy groups of transformation groups*, 1123–1136
Rigby, J. F. *Axioms for absolute geometry*. II, 876–883
———*Pascal ovals in projective planes*, 1462–1476
Robertson, M. S. *Coefficients of functions with bounded boundary rotation*, 1477–1482
Roggenkamp, Klaus W. *On the irreducible lattices of orders*, 970–976
Rosenthal, Peter; Davis, Chandler; and Radjavi, Heydar. *On operator algebras and invariant subspaces*, 1178–1181
Rowlinson, Elizabeth and Schwerdtfeger, Hans. *Polynomials with certain prescribed conditions on the Galois group*, 262–273
Rubel, L. A. and MacLane, G. R. *On the growth of Blaschke products*, 595–601
Ruston, A. F. *A note on the Caradus class* $\mathfrak{F}$ *of bounded linear operators on a complex Banach space*, 592–594

Sandler, Reuben. *On finite collineation groups of* F_5, 217–221
Sauer, N. *Extremal point and edge sets in n-graphs*, 1069–1075
Schafer, James A. *Abelian groups with a vanishing homology group*, 406–409
Schnèider, W. J. and Barth, K. F. *On a question of Seidel concerning holomorphic functions bounded on a spiral*, 1255–1262
Schwerdtfeger, Hans and Rowlinson, Elizabeth. *Polynomials with certain prescribed conditions on the Galois group*, 262–273
Sehgal, Sudarshan K. *On the isomorphism of integral group rings*. I, 410–413
——— *On the isomorphism of integral group rings*. II, 1182–1188
Seo, Tae Kun. *See* Tae Kun Seo
Shaker, Richard J. and Kaplansky, Irving. *Abstract quadratic forms*, 1218–1233
Shauck, Maxwell E. *Algebras of holomorphic functions in ringed spaces*. I, 1281–1292
Singer, Ivan; Levin, Mark; and McArthur, C. W. *On the cones associated with biorthogonal systems and bases in Banach spaces*, 1206–1217
Smith, William W. *Projective ideals of finite type*, 1057–1061

Sreenivasulu, V. *The maximum term and the rank of an entire function*, 257–261
Stampfli, J. G. *Adjoint abelian operators on Banach space*, 505–512
Stephenson, W. *Unique addition rings*, 1455–1461
Stewart, James. *Unbounded positive definite functions*, 1309–1318
Stolarsky, Kenneth B. *A lower bound for the Scholz-Brauer problem*, 675–683
Szekeres, G. and Blatt, D. *A skew Hadamard matrix of order 52*, 1319–1322

Tae Kun Seo and Whaples, G. *A generalization of global class field theory*, 609–614
Thomason, S. K. *A note on non-distributive sublattices of degrees and hyperdegrees*, 147–148
Timourian, J. G. *Maps with discrete branch sets between manifolds of codimension one*, 660–668
Tucker, Thomas W. and Bender, Edward A. *The exponents of strongly connected graphs*, 769–782
Tymchatyn, E. D. *A one-parameter subsemigroup which meets many regular $\mathscr{D}$-classes*, 735–739

Ullman, J. L. and Lyndon, R. C. *Groups generated by two parabolic linear fractional transformations*, 1388–1403

Van Vleck, F. S. and Himmelberg, C. J. *Some selection theorems for measurable functions*, 394–399
Varma, A. K. and Prasad, J. *An analogue of a problem of J. Balázs and P. Turán*, 54–63
Vinograde, B.; Haddix, G. F.; and Mordeson, J. N. *On purely inseparable extensions of unbounded exponent*, 1526–1532
Viswanathan, T. M. *Generalization of Hölder's theorem to ordered modules*, 149–157
Vleck, F. S. Van. *See* Van Vleck, F. S.

Wales, David B. *Finite linear groups of prime degree*, 1025–1041
——— *Finite linear groups of degree seven.* I, 1042–1056
Watters, J. F. *Lower radicals in associative rings*, 466–476
Welsh, D. J. A. *Transversal theory and matroids*, 1323–1330
Wenger, R. *Some semigroups having quasi-Frobenius algebras.* II, 615–624
Wenner, B. R. *Remetrization in strongly countable-dimensional spaces*, 748–750
Wenzel, G. H. *Automorphism groups of unary algebras on groups*, 1165–1171
Werner, W. L. *A double-centralizer theorem for simple associative algebras*, 477–478
Westwick, Roy. *Linear transformations on Grassmann spaces*, 414–417
Whaples, G. and Tae Kun Seo. *A generalization of global class field theory*, 609–614
Wilken, Donald R. *A note on strongly regular function algebras*, 912–914
Wille, Rudolf. *Variety invariants for modular lattices*, 279–283
Williams, Kenneth S. *Distinct values of a polynomial in subsets of a finite field*, 1483–1488
Wong, R. and Wyman, M. *The asymptotic behaviour of $\mu(z, \beta, \alpha)$*, 1013–1023
Wyman, M. and Wong, R. *The asymptotic behaviour of $\mu(z, \beta, \alpha)$*, 1013–1023

Zamfirescu, Tudor. *On planar continuous families of curves*, 513–530
Zassenhaus, Hans J. *A presentation of the groups* PSL(2, p) *with three defining relations*, 310–311
